DETAILED ACTION

Claim Objections

Claim 2 is objected to because of the following informalities: Claim 2, Line 4, "a reference" should be --the reference--, Line 14, "countra-rotational" should be --counter-rotational--, Line 15, "convolution" should be --revolution--. Appropriate correction is required.

Claims 9-13 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 9-13 have not been further treated on the merits.

NOTE: In addition to the correction of improper multiple dependencies the following rejections point out further issues that should also be addressed.

Claims 10-13 provides for the use of "a pneumatic actuator", but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claims 10-13 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 5/1, 6/1, 7, and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Danna et al (5018506).

Danna et al discloses a pneumatic actuator having an airtight elongated hollow body (13 etc.), at least one compression member (20 etc.), at least one pair of tension elements (14 etc.) laid helically in an opposite sense of rotation, wherein a first end of the actuator is connected to a reference system (12) and a second end of the actuator can perform a movement and/or exert a force relative to the reference system. Wherein the actuator is capable of being reset into the deactivated position by a spring element (20), and the actuator has a second hollow body (513B, Fig. 11) and at least one further pair of tension elements (514B, Fig. 11).

Allowable Subject Matter

Claims 2-4, 5/2-4, and 6/2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. 6543730 and 3561330 each disclose a pneumatic actuator.
